IMPROVING HOUSING. ENHANCING LIVES.

Delivering Strong Window Strategies

Helping social housing landlords across the UK with value-added window and door strategies to create energy efficient, healthy homes and ultimately, improve tenants' lives.

Anglian Building Products (ABP) has been partnering with clients in social housing for the last six decades, helping housing associations and local authorities tackle today's significant challenges, especially around creating healthy and more sustainable homes.

Thinking Local First

As part of a large and well-established group, ABP can draw on our significant group resources to deliver national and regional, large, medium, and small projects, efficiently and accurately with dedicated RLOs and local depots.

We invest in the communities in which we live and work through applying structures, employment, training, and resources, with social value a non-negotiable offering.

Where once the focus was primarily on the Decent Homes Standard, housing providers are now navigating a far broader landscape, with multiple priorities running alongside each other.

Does your window strategy support:

- Fire remediation
- Damp and mould
- Ventilation / Overheating
- Decarbonisation / Retrofit
- Repairs and maintenance backlogs
- Planned investment programmes
- Future Homes Standard compliance

We are the UK's largest, end-to-end manufacturers, surveyors, project managers and installers of doors and windows for social housing, but we're about so much more than that. Manufacturing and installing top-quality products is a given, but as any service provider to this sector knows, successful relationships rely on collaboration, true partnering models and advice.

Supporting Wave 3

Unusually for a contractor, ABP is PAS 2030 certified so alongside our compliance assurance, expert support, and dedicated partnerships, we're perfectly positioned to support clients across the UK get the best out of decarbonisation and retrofit projects and SHDF funding.

Dovetailing with the sector's drive for Healthy Homes and journey to Net Zero is our strategic commitment to sustainability. Ethical leadership and environmental responsibility are embedded in our operating model. We heavily invest in our people development and maintain a 5% apprenticeship commitment.

IMPROVING HOUSING.
ENHANCING LIVES.

Anglian Building products

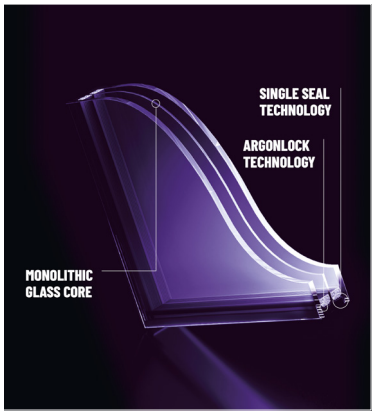

COMING SOON

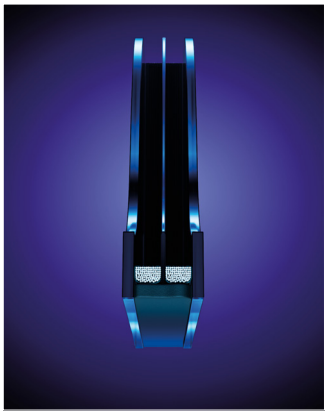

A new thin triple-glazed sealed unit, engineered to deliver triple-glazing performance without changing window frames or glazing beads.

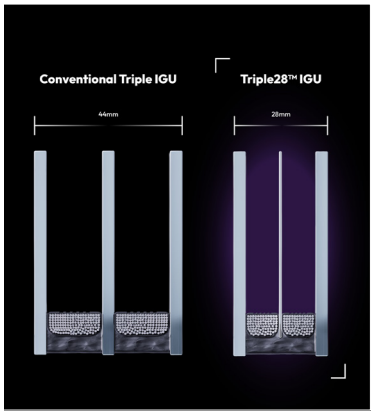

High performance triple glazing has been talked about in the UK market for many years, but the practicalities of achieving meaningful performance benefits haven't been straightforward to overcome. UNTIL NOW.

Allowing social housing clients to retrofit existing double glazed IGUs, upgrading them to high performance thin triple glazing and achieving a U-value of 0.8 w/m2k, the new product ZER0.8™ offers up to 90% greater thermal efficiency compared with standard double-glazed units.

As with all new innovations launched into social housing, we're keen to work with clients to get feedback and collaborate. In coming months, we'll be meeting the market to show how replacing windows using ZER0.8™ is a better way to spend public money, making budgets go further and increasing homes' thermal efficiency for clear and tangible upgrades with significant performance benefits over double glazing.
